Threads in Java :→

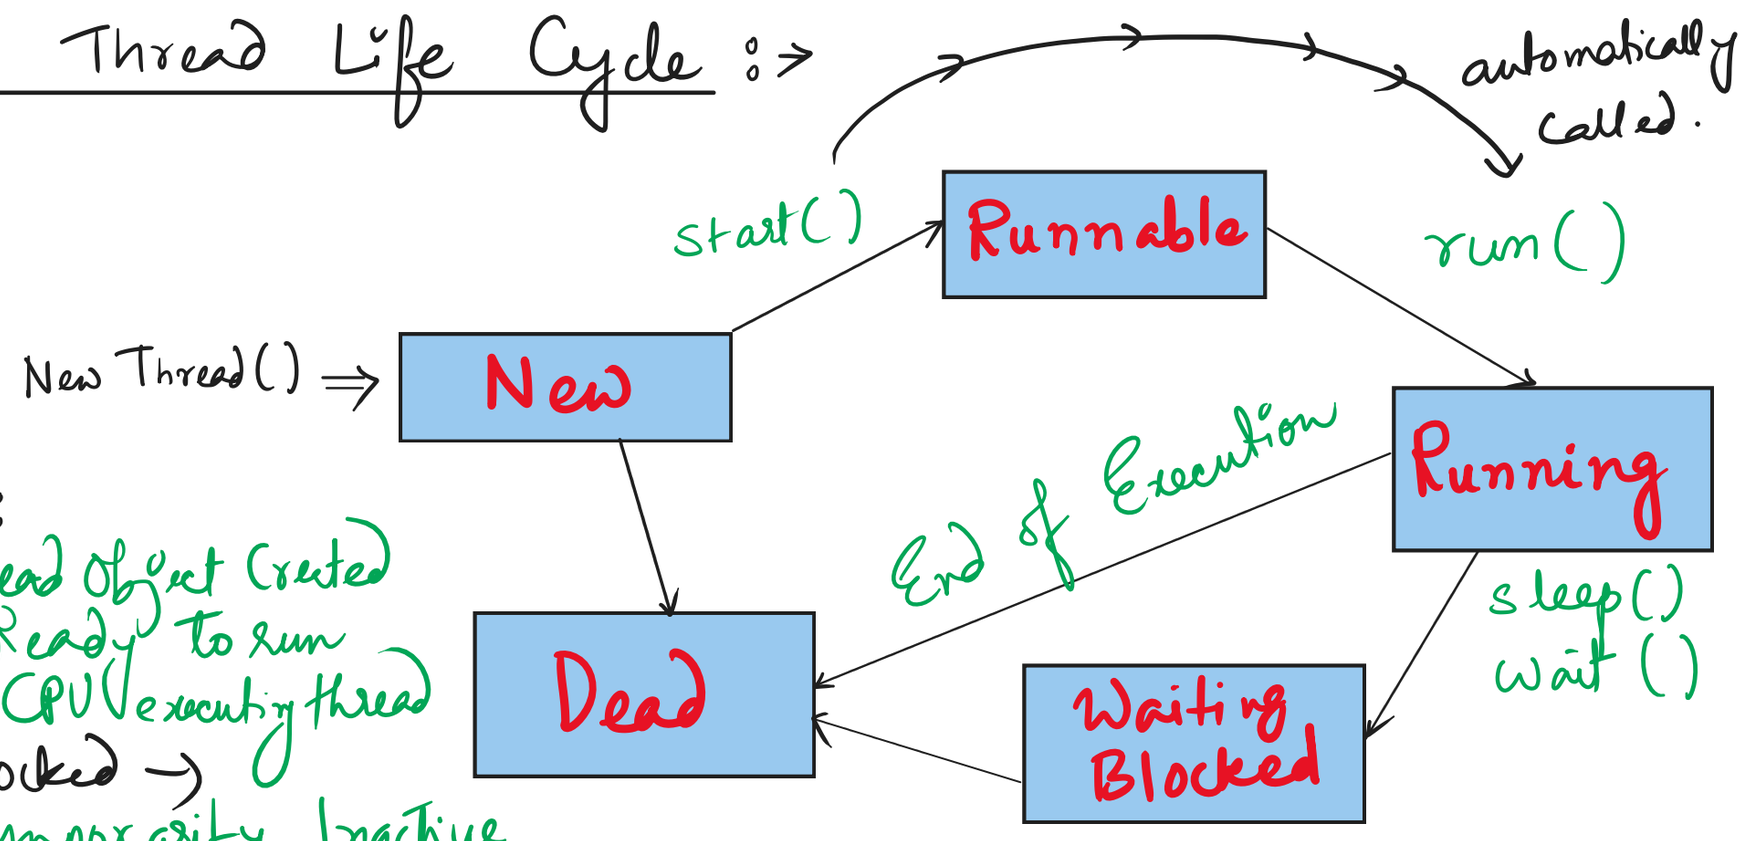
Definition :→ A thread is the smallest unit of execution within a program that can run independently.

Explanation :→

* When a Java program starts, one thread is already running → main thread.
* If your program has only one thread :
  → Tasks run one after the other.
* With multiple threads :
  → Tasks run at the same Time (simultaneously)

(Thread) (Runnable)

The Thread Life Cycle :→



Explanation:
New → Thread Object Created
Runnable → Ready to run
Running → CPU executing thread
Waiting / Blocked → Temporarily Inactive
Terminated / Dead → Execution Finished
