
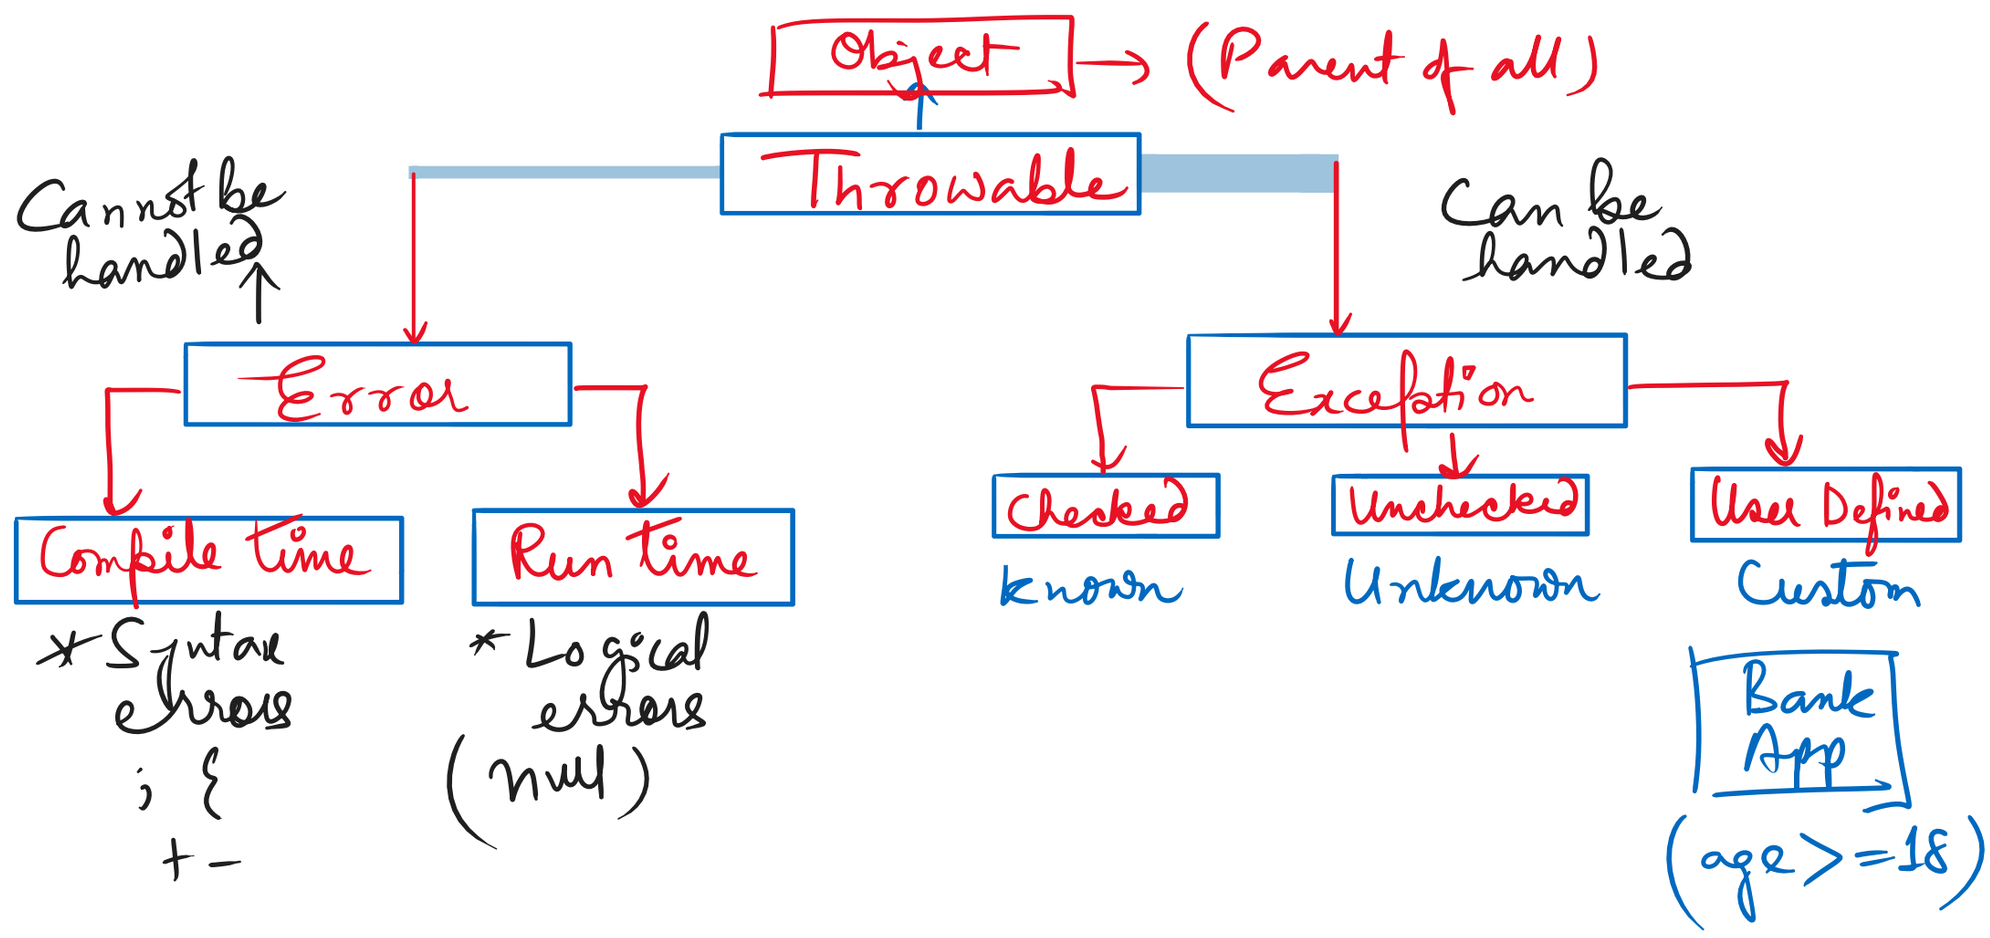
* Anything that disturbs / disrupts the normal flow of execution of code / program is called an exception.
* The process of handling exceptions (gracefully) is called Exception Handling.



C#

```
try {
    do something();
}
catch (          ){
    Display Msg for User
}
```

Destructor()

No finally block

Java

```
try {
    do something();
}
catch (          ){
    Display Msg for User
}
finally {
    all mandatory shut down.
}
```

Python

```
try:
    do something()
except:
    Display Msg for User
finally:
    All mandatory shut down or release of resources
```
