Exception Handling Continued!

Recap: → Parent of all errors & exceptions ⇒ Throwable

Base class of all exceptions ⇒ Exception

Types of exceptions: (I) Checked (II) Unchecked (III) User or custom

Exception Handling Block Hierarchy

try → logic & operations
catch → messages to the user
finally → release of resources

```
try {
}
catch( ){
}
finally {
}
```

min balance = 2000
total balance = 5000
amount = 8000

⇒ throw new Insufficient Funds

```
static void
withdraw
( tb , amt ){
    mb = 2000;
}
```

mb = 2000
tb = 6000
am = 4000

⇒ withdrawn ⇒ 4000
L balance = 2000

(I) Can we write a try block without catch or finally?

⇒ Yes, it is possible if we pass the resource in the try block.

* { try with resources } try ( ) { }

(II) How is it closing? (Automatically)

final → Keyword → { constant } { class, method, var, parameter }

finally → (block) in exception handling → { It always executes no matter if the code breaks. }

method finalize( ) → Deprecated: No longer in use (Object class)

In older versions of Java, finalize( ) was called by gc( ) or garbage collector for clearing clutter. Now, JVM handles.
