

DBMS :-> Continued!

Select From Where  
①                  ②                  ③

Data Query Language  $\rightarrow$  DQL

Using the select clause / command

Suppose we have a table named student & we want to fetch all the records (rows)

⇒ SELECT \* FROM table-name;

⇒ SELECT \* FROM student;

CREATE → database, table

USE  $\rightarrow$  database

SELECT  $\rightarrow$  DDL

FROM  $\rightarrow$  CLAUSE

WHERE  $\rightarrow$  Condition

AND  $\rightarrow$  Logical AND

LIMIT  $\rightarrow$  Limiting word laws

ASC / DESC  $\rightarrow$  Sorting

✓ PRIMARY KEY → Unique identifi<sup>n</sup>  
 AUTO - INCREMENT → 1st record  
 NOT NULL  
 DISTINCT → Unique data display  
 id - 1 xx  
 ++, ++  
 2, 3, ...
